Biofluid mechanics is a vast field that involves fluid motion inside and outside living organisms. The human circulatory system illustrates some of the many challenges associated with understanding and modeling biological fluid flows. It is a branched network of flexible-wall vessels through which a non-Newtonian fluid flows in an unsteady manner. The branched geometry of the blood vessels minimizes flow resistance while providing a large surface area at the capillary level for the exchange ...

Biofluid mechanics focuses on how biological systems interact with and/or use liquids/gases. For humans, this includes obtaining and transporting oxygen, maintaining body temperature and regulating homeostasis. Biofluid mechanics is not only concerned with the cardiovascular system and cardiovascular diseases but also lung disease, which is a common area of interest for biofluid mechanics engineers. Nearly every device intended for biological use will have to consider fluid mechanics laws ...

Biofluid dynamics may be considered as the discipline of biological engineering or biomedical engineering in which the fundamental principles of fluid dynamics are used to explain the mechanisms of biological flows and their interrelationships with physiological processes, in health and in diseases/disorder. It can be considered as the juncture of mechanical engineering and biological ...

TCC, Bio-Fluid Mechanics March 2009 - p.5/11. Unsteady solution The ODE has a particular solution of a constant. The full solution with the boundary condition can be written $u = G \sin \alpha t - J_0(x)$ where $x = i3/2 \sqrt{\alpha}$ where J_0 is the Bessel function of order zero. Near $z = 0$, approximately $J_0(z) \approx -z^2/4$ whereas as $z \rightarrow \infty$ $J_0(z) \approx \sqrt{2/\pi z} \cos(2\pi z)$ (in a suitable sector of ...
