Diptera Brachycera

Diptera Brachycera

Diptera Brachycera

Les brachycères, Brachycera, forment un sous-ordre d'insectes diptères qui comprend les mouches muscoïdes aux antennes courtes (du grec brachy signifiant "court" et ceros "corne"). Les antennes sont formées de trois articles ; le dernier article porte une longue soie, nommée arista, ou bien un style plurisegmenté.

On distingue deux grands sous-ordres de diptères : Nematocera et Brachycera. Sous-ordre des nématocères [modifier | modifier le code] Les nématocères sont un sous-ordre (certainement paraphylétique), de diptères dont les antennes (grec ceros : corne) sont en forme de fil (grec nematos), avec des ailes longues et plus de trois articles par antenne (moustiques , anophèles), tipule, chironomes.

Diptera — Wikipédia

Aluli are a newly acquired feature of the Diptera (Hennig, 1973) and aluli are usually absent or poorly developed in the Nematocera (excepting Anisopodidae) but present and relatively large in the Brachycera. In higher Diptera between the alula and the thorax is the upper calyptra, also the tegula.

Morphology of Diptera - Wikipedia

The Diptera-Brachycera is one of the 58 Fauna Europaea major taxonomic groups, and data have been compiled by a network of 55 specialists. Within the two-winged insects (Diptera), the Brachycera constitute a monophyletic group, which is generally given rank of suborder. The Brachycera may be classified into the probably paraphyletic 'lower brachyceran grade' and the monophyletic Eremoneura. The latter contains the Empidoidea, the Apystomyioidea with a single Nearctic species, and the ...
