The simple and common power system connections can be used to understand the flow of harmonic power in the system due to nonlinear loads.  $V_g$  is the generator of the utility, which generates fundamental power. The  $Z_s$  is the source impedance and  $Z_l$  is the distribution network impedance, which a load see from the load end. The  $Z_l$  causes drop in the voltage due to load current. Meter  $M_2$  measures ...
