Do you UNDERSTAND?

14. **Compare and Contrast** What are the similarities between the sine, cosine, and tangent ratios? What are the differences?

Answers may vary. Sample: The sine and cosine ratios use the hypotenuse length as the denominator. The tangent does not. The cosine and tangent both use the adjacent leg length in the ratio. The sine and tangent both use the opposite leg length in the numerator.

15. **Reasoning** How would you find the measure of $\angle A$ in right $\triangle ABC$?

Answers may vary. Sample: Use the distance formula to find the length of each side. Then find one of the trigonometric ratios for $\angle A$. Use the inverse of that ratio to find $m\angle A$.
