

## Content Outline for Teaching

### Chemical Bonds

## Chapter 19

Underlined words and phrases are to be filled in by students on the Note-taking Worksheet.

### Section 1 Stability in Bonding

- A. Some elements combine chemically and no longer have the same properties they did before forming a compound.
- B. A(n) chemical formula is composed of symbols and subscripts indicating the number of atoms of an element in a compound.
- C. Atoms form compounds when the compound is more stable than the separate atoms.
1. Noble gases are more chemically stable than other elements because they have a complete outer energy level.
  2. Elements that do not have full outer energy levels are more stable in compounds.
  3. Atoms can lose, gain, or share electrons to get a stable outer energy level.
  4. A(n) chemical bond is the force that holds atoms together in a compound.

#### DISCUSSION QUESTION:

Why do elements form compounds? *To become more chemically stable by getting a complete outer energy level*

### Section 2 Types of Bonds

- A. A(n) ion is a charged particle because it has more or fewer electrons than protons.
1. When an atom loses an electron, it becomes a positively charged ion; a superscript indicates the charge.
  2. When an atom gains an electron, it becomes a negatively charged ion.
- B. An ionic compound is held together by the ionic bond—the force of attraction between opposite charges of the ions.
1. The result of this bond is a(n) neutral compound.
  2. The sum of the charges on the ions is zero.
- C. Molecules are neutral particles formed as a result of sharing electrons.
1. A covalent bond is the force of attraction between atoms sharing electrons.
  2. Atoms can form double or triple bonds depending on whether they share two or three pairs of electrons.

Section 2 Reinforcement Chemical Equations Answers Recognizing the habit ways to acquire this books section 2 reinforcement chemical equations answers is additionally useful. You have remained in right site to start getting this info. get the section 2 reinforcement chemical equations answers partner that we meet the expense of here and check ...

### Section 2 Reinforcement Chemical Equations Answers

Section 2 Chemical Formulas and Equations Key Concept Chemical formulas and chemical equations are used to show how atoms are rearranged to form new substances in a chemical reaction. What You Will Learn • Chemical formulas are a simple way to describe which elements are in a chemical substance. • Chemical equations are a concise way to write how atoms are rearranged in a chemical reaction ...

### Section 2 Chemical Formulas and Equations - Travellin

Section-2-Reinforcement-Chemical-Bonds-Answers 1/3 PDF Drive - Search and download PDF files for free. Section 2 Reinforcement Chemical Bonds Answers [eBooks] Section 2 Reinforcement Chemical Bonds Answers Right here, we have countless book Section 2 Reinforcement Chemical Bonds Answers and collections to check out. We additionally allow variant types and furthermore type of the books to ...

### Section 2 Reinforcement Chemical Bonds Answers

Section 2: Chemical equations. STUDY. Flashcards. Learn. Write. Spell. Test. PLAY. Match. Gravity. Created by. LaurenMiley2000. Terms in this set (13) chemical equation . are shorter, easier, way to show chemical reactions, using symbols instead of work.

What's needed to write an equation - chemical formulas, reactants, and products. chemical formulas. identifying the element in a chemical ...

SECTION 2.4 CHEMICAL REACTIONS Reinforcement KEY CONCEPT Life depends on chemical reactions. At the most fundamental level, every process that takes place in an organism depends on chemical reactions. In a chemical reaction, substances are changed into different substances by the breaking and forming of chemical bonds. The substances that are present at the start of a chemical reaction, and ...
